3 Ways What You Eat Affects Your Feet

March is National Nutrition Month and a good time to make the connection between diet and podiatric health. Eating a diet packed with nutritious foods, prepared in healthy ways, and containing the appropriate amount of calories directly impacts how your feet feel and function. Below are three areas your diet can make or break:

1. Your Risk for Foot Problems

If the food you are eating is leading to you being overweight or obese, you are putting yourself at a much higher risk for many common podiatric disorders. Since they bear the weight of your entire body, your feet are the most impacted by weight gain. It's also not a pound-for-pound equation. For every pound you gain, you put 4-8 additional pounds of pressure on your lower extremities. It leaves you more vulnerable to physical foot problems such as flat feet, plantar fasciitis, bone spurs, and tendonitis.

Excess weight can harm your feet in other, more subtle ways too. It increases your risk for diabetes and heart disease. These conditions can cause poor circulation and diseases such as peripheral arterial disease and neuropathy that can lead to infections and wounds in your feet that are difficult to heal.

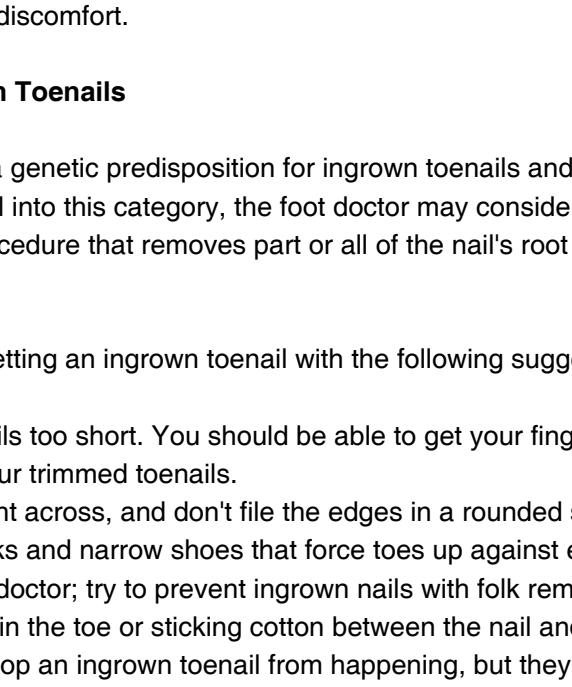

2. Bone Strength

Did you know that nearly a quarter of all the bones in your body are located in your feet? Tasked with the job of carrying all of your body weight, feet need to stay strong. Bone strength can be maintained and even increased by eating foods rich in calcium and vitamin D. If you're not a fan of dairy, explore other calcium-rich options such as chia and sunflower seeds, fortified orange juice, white beans, and dried figs.

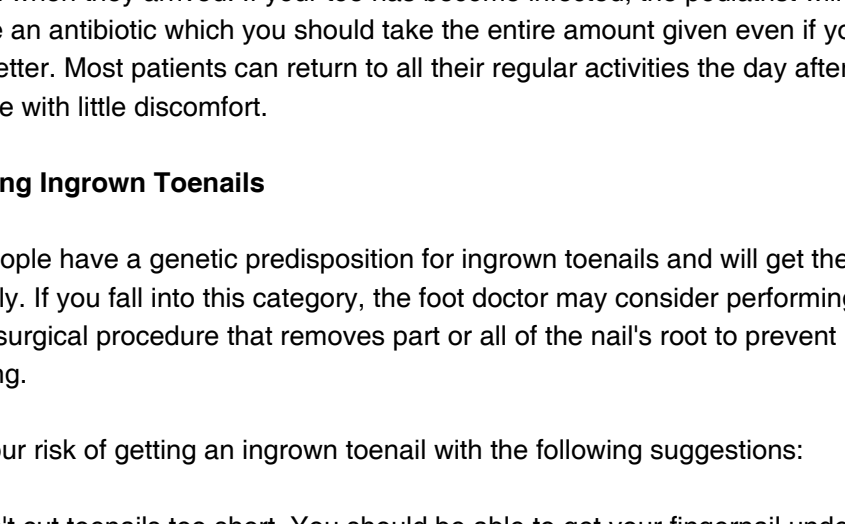

3. Pain and Inflammation

These are the two primary sources of discomfort for many foot problems, from arthritis to heel pain to tendonitis and ball of foot pain. Food choices can increase or decrease inflammatory responses in the body. Avoid fried and processed foods and those high in added sugars, as these are known to trigger an inflammatory reaction. Eat more berries, green leafy vegetables, olive oil, nuts, fatty fish, and citrus fruit to reduce painful inflammation in your feet and the rest of your body.

Don't Fear Ingrown Toenail Treatment

Few podiatric conditions are as painful as an ingrown toenail. As the nail digs into the skin surrounding the nail bed, the toe becomes red, swollen, hot, and oh-so-sensitive to any touch. Unfortunately, this causes many patients to suffer for far longer than they need to because they are too afraid of how painful it will be to have the podiatrist treat their ingrown nails.

Get Relief Fast

Putting off getting your ingrown toenail treated not only extends your time in pain but can also allow bacteria to enter the open skin and create an infection. If you have a fever along with your ingrown nail, it's essential that you seek medical care promptly. Once you do, you'll be glad you did.

Your podiatrist is aware of how painful your ingrown nail is. They will gently numb the toe with local anesthesia. The nail can then be removed from the skin. A small bandage will be applied to the toe, and nearly all patients walk out of the foot doctor's office in less pain than when they arrived. If your toe has become infected, the podiatrist will also prescribe an antibiotic which you should take the entire amount given even if your toe seems better. Most patients can return to all their regular activities the day after the procedure with little discomfort.

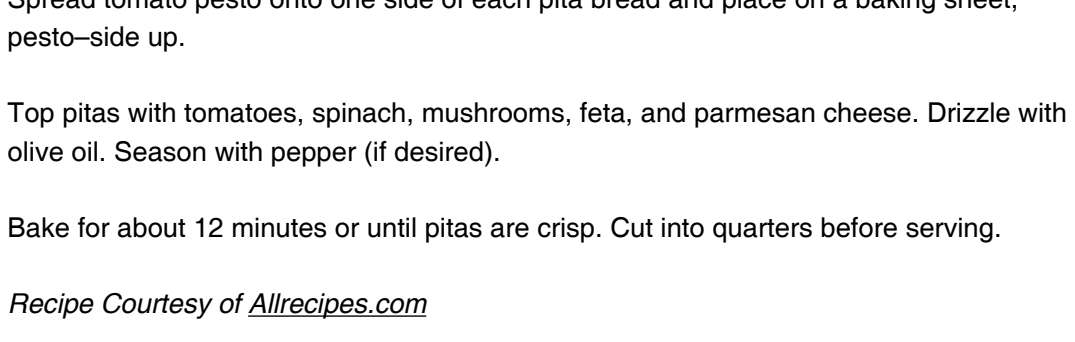

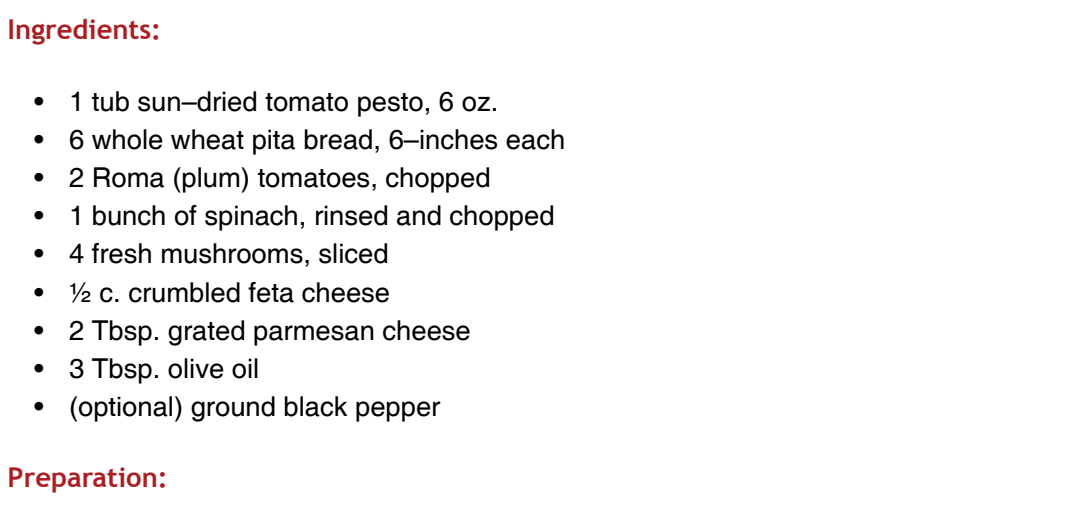

Preventing Ingrown Toenails

Some people have a genetic predisposition for ingrown toenails and will get them repeatedly. If you fall into this category, the foot doctor may consider performing a minor, in-office surgical procedure that removes part or all of the nail's root to prevent it from re-growing.

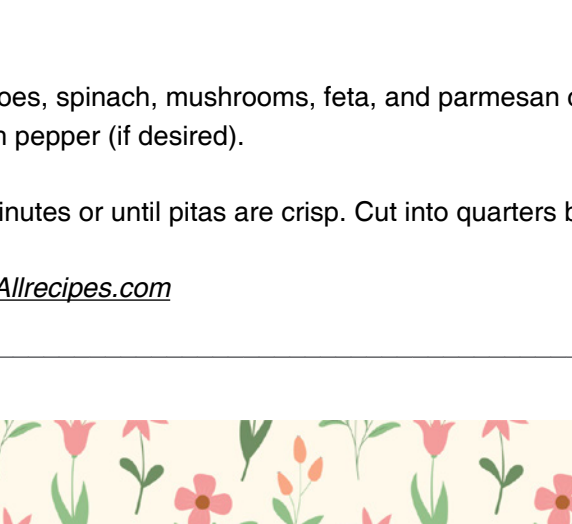

Lower your risk of getting an ingrown toenail with the following suggestions:

- Don't cut toenails too short. You should be able to get your fingernail under the front and sides of your trimmed toenails.
- Cut nails straight across, and don't file the edges in a rounded shape.
- Avoid tight socks and narrow shoes that force toes up against each other.
- Don't play foot doctor; try to prevent ingrown nails with folk remedies such as cutting a notch in the toe or sticking cotton between the nail and nail bed. Not only will these not stop an ingrown toenail from happening, but they will also likely result in injury and infection to your foot.

If you believe you have an ingrown toenail, contact your podiatrist for an appointment today.

Recipe of the Month Spinach and Feta Pita Bake

This quick and easy dish can serve well as an appetizer at a party or a meal around the table.

Ingredients:

- 1 tub sun-dried tomato pesto, 6 oz.
- 6 whole wheat pita bread, 6-inches each
- 2 Roma (plum) tomatoes, chopped
- 1 bunch of spinach, rinsed and chopped
- 4 fresh mushrooms, sliced
- ½ c. crumbled feta cheese
- 2 Tbsp. grated parmesan cheese
- 3 Tbsp. olive oil
- (optional) ground black pepper

Preparation:

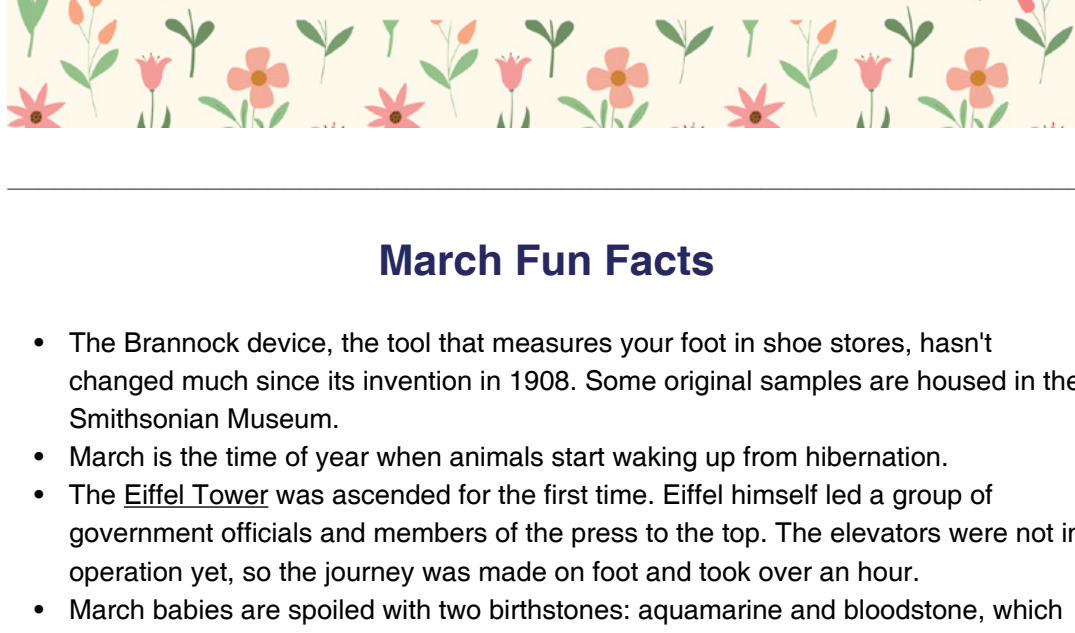

Preheat oven to 350 degrees F.

Spread tomato pesto onto one side of each pita bread and place on a baking sheet, pesto-side up.

Top pitas with tomatoes, spinach, mushrooms, feta, and parmesan cheese. Drizzle with olive oil. Season with pepper (if desired).

Bake for about 12 minutes or until pitas are crisp. Cut into quarters before serving.

March Fun Facts

- The Brannock device, the tool that measures your foot in shoe stores, hasn't changed much since its invention in 1908. Some original samples are housed in the Smithsonian Museum.
- March is the time of year when animals start waking up from hibernation.
- The Eiffel Tower was ascended for the first time. Eiffel himself led a group of government officials and members of the press to the top. The elevators were not in operation yet, so the journey was made on foot and took over an hour.
- March babies are spoiled with two birthstones: aquamarine and bloodstone, which symbolize courage.

March Special Days - Mark Your Calendar!

March 12 – Daylight Savings Time Begins
March 13 - National K9 Veterans Day

March 17 - St. Patrick's Day
March 20 – Spring Begins

March 27 – World Theatre Day

Trivia

The Ides of March is a famous day. What day is it?

- A. 3rd
- B. 5th
- C. 15th
- D. 31st

Answer: C
